

MESO NECK & DÉCOLLETÉE LIFT

Firm the neck and chin with MESO NECK & DÉCOLLETE LIFT

MESO NECK & DÉCOLLETE LIFT is an effective method to achieve firm, healthy skin. It is a non-greasy meso product for the facial area, which reduces wrinkles and, for example, can be used to firm the skin on the neck area.

The treatment is completely harmless and without side effects, and therefore is an excellent alternative to other treatments such as Botox.

MESO NECK & DÉCOLLETÉE LIFT

Contents:

- 10 x 5 ml vials
- 10 x transparent pipettes
- For 10 treatments

Item no.: MST106

 **mesoskinline**[®]
MILANO - HAMBURG - COPENHAGEN By Alexandra Kjaersfeldt

MESO NECK & DÉCOLLETE LIFT contains three important ingredients that are key to achieving a successful, wrinkle-reducing result.

MESO NECK & DÉCOLLETE LIFT is the first product to combine DMAE, elastin and methylsilanol, making it the most advanced wrinkle-reducing meso skincare product on the market today.

The significant elasticity is due to the protein's complex composition of crosslinked peptide chains. Parts of them fold in a way that enables the molecule to stretch 50-80% and still return to its original position.

DMAE, Elastin, Organic Silicium to Restore the Skin

MESO NECK & DÉCOLLETE LIFT mainly comprises amino acids, glycine, valine, alanine and proline. The key ingredients, Elastin, is a specialised protein with a hefty molecular weight of 64 to 66 kDa.

As we age, the amount of elastin in our tissue reduces, and the skin loses its elasticity. With the right content of elastic, MESO NECK & DÉCOLLETE LIFT regenerates and rebuilds the skin's elasticity and makes it look younger and firmer.

MESO NECK & DÉCOLLETE LIFT is a fantastic alternative to Botox. Its formula effectively reduces the appearance of fine lines and wrinkles on all skin areas, both face and body.

Methylsilanol mannuronate

Methylsilanol mannuronate is an organic connection derived from seaweed. The seaweed plant is known for its detoxing properties, and methylsilanol mannuronate acts as an antioxidant that prevents the early signs of ageing.

Methylsilanol mannuronate has long-lasting, moisturising properties that fight the breakdown of collagen and elastin fibers. That's why it has a firming effect on the skin. The connection is also known to fight free radicals. In vitro testing shows that methylsilanol mannuronate normalises the cell's metabolism, is regenerating on the tissue and helps reduce orange peel skin without any side effects.

Methylsilanol mannuronate is a safe and natural ingredient used in skincare products, and The Environmental Working Group has declared the connection as 100% safe for cosmetic use.

The combination of DMAE, elastin and methylsilanol mannuronate makes MESO NECK & DÉCOLLETE LIFT a unique treatment for reducing wrinkles and firming the neck and jawline.

Active ingredients (12)

DMAE (a key antioxidant that strengthens fibroblasts and thus firms the skin), Elastin (a protein that helps the skin return to its original position), Organic silicium (Methylsilanol Mannuronate is an organic derivative of sea-weed that binds moisture into the epidermis and therefore strengthens the skin).

Main treatment areas

- Face
- Body
- Décolletée
- Neck

This treatment benefits

- Anti-ageing, early signs of ageing
- Firms the skin on the neck and décolleté
- Reduces the length and depth of wrinkles
- Prevents and reduces wrinkles or stretch marks
- Increases the skin's elasticity and stimulates collagen production

TREATMENT FREQUENCY / TIP

- Once every 7-10 days x 8
- Can be applied on all skin areas, and especially efficient around the neck and décolletée.

AGE

- 40+

INGREDIENTS

AQUA, GLYCERIN, METHYLSILANOL MANNURONATE, DIMETHYLAMINOETHANOL BITARTRATE, HYDROLYZED ELASTIN, PROPYLENE GLYCOL, XANTHAN GUM, PHENOXYETHANOL, PENTYLENE GLYCOL, SODIUM HYDROXIDE, ETHYLHEXYLGLYCERIN, DISODIUM EDTA
